10102, 10103, 10104, 10105, 10107, 10108, 10109,
10110, 10111, & 10112

Description
A vinyl acrylic water-base decorative coating formulated for all types of application methods on a variety
of properly primed or previously painted surfaces. This product should be used where a beautiful
metallic finish is desired on any interior surface.

Application
Although this product can be brushed, rolled or sprayed, when covering a large area, we recommend
spray application to achieve the most uniform finish. HVLP and conventional air spray should be used
with an agitator to assure the pigments and liquids are constantly mixed. We do not recommend using
an airless sprayer.

Surface Preparation
Surfaces must always be free of moisture, grease, oil, wax, loose particles or other contaminants. Never
use this product over unsanded glossy surfaces or on areas where surface temperature is below 50°F.
Whenever possible, we recommend application over a white background. Unpainted surfaces should be
properly primed with a quality oil-based primer such as our Crescent Bronze Alkyd Enamel Primer
#10571. Consult manufacturers’ specifications for proper surface type and preparation in order to
achieve satisfactory adhesion. Painted surfaces in good condition painted with other matte or flat latex
coatings should not require additional surface preparation; however, we highly recommend testing a
small area to insure satisfactory adhesion. Glossy surfaces must be lightly sanded and followed up with
a quality oil-based primer. Again check the manufacturer’s application recommendations.

Clear Coating
In many instances, clear coating may be required to improve gloss, reduce “rub-off”, or improve
washability. However, we do not recommend regular cleaning of this metallic finish. If a clear coat is
required, we recommend the use of our Modified Alkyd Clear Coat #10560 or Medium Oil Alkyd Enamel
Clear 10588. Other manufacturer’s clear coats could be used; however, it is extremely important to test
these and any other products used as a clear coat for compatibility with our Chromatone finishes. Many
products may discolor the Chromatone finishes and Crescent Bronze assumes no responsibility for the
results obtained when using these products.

Dry Time
At 70°F and 50% relative humidity, will dry to touch in approximately 30 minutes to an hour. Print free
time is about 2 hours and may be recoated after 12 hours. Cooler and more humid conditions will
extend these timeframes. Application is not advised when air temperatures have dropped below 50°F.
High humidity will increase dry time, as well as increase the chances of tarnishing.
**COVERAGE**
Approximately 350 – 400 square feet per gallon (at 1mil D.F.T.), depending on surface condition and application method. One coat may be satisfactory (depending on background color and application method); but we recommend two coats for best results. Recommended dry film thickness is .75 – 2.0 mils.

**THINNER/CLEANUP**
Some spray applications may require slight thinning for proper use. If necessary, thin with water at a rate of 6-12% (by volume) or about 8 to 16 ounces per gallon. Clean up with warm soapy water immediately after use.
